

I ran into an issue when doing this assignment. After an hour my laptop would disconnect from the virtual machine and never allow it to finish with the 4 million lines. After the first crash I had it only read 1 million lines but after it crashed a second time I had to reduce the quantity to 100,000 in order for it to be able to finish the process. I hope this isn't too big of a problem but it was the best solution I could get in time.
